

Fluffo Acoustic Panels

Fluffo acoustic wall panels are perfect for open plan learning spaces and large lecture theatres where learning can be impeded by poor acoustics. Excess sound reverberation can impact concentration and obstruct communication as speech is distorted by low-level echo and learners strain to hear as they collaborate and share ideas.

Fluffo is made from a high density bio-soluble mineral wool which absorbs 80% of the sound that hits it. Fluffo panels come in 16 shapes and 52 stunning colours so it is easy to create a stunning design feature that can be strategically placed to significantly improve the acoustic environment of your learning spaces.

Fluffo panels are deep enough to absorb low frequency sounds which makes them perfect for reducing sound distortion in rooms that use audio visual equipment.

This product is fire safe to BS EN 13501-1 D S1,d0 and is suitable for use in general teaching spaces.

- Available in 52 colour options
- Available in 16 shapes and two thicknesses
- Fire safe to BS EN 13501-1 D- S1,d0
- 0.8 Noise Reduction Coefficient
- Panels designed to fit together to create acoustic 'feature walls'
- Coated in soft-touch polyamide microfibrres
